

Commercial Door Operator

The Door Operator Specialists

Wireless Commercial Keypad Transmitter

Model 466LM

easy, time-saving installation with no wiring, conduit or trenching needed

ideal for commercial door and gate installations

100,000 available code combinations

Easily mounts on a wall or on a pedestal

improved water-tight design!

Unlike other commercial keypads, the 466LM offers 100,000 different code combinations. The water-resistant keypad is designed to work with any LiftMaster® radio control receiver. Multiple doors or gates can easily be operated from one permanently mounted remote location, and when used with the STAR™250 access control receiver, pedestrians, guests and maintenance personnel will find it easy to manage up to 250 unique code entry combinations.

low-battery indicator LED

Informs user when battery needs replacing.

vandal-resistant construction

Includes a stainless steel faceplate, keypad and lock combined in a painted steel housing for extra strength and security.

description

This unique commercial keypad has two major advantages over wired models: (1) the ease of wireless installation, and (2) lower cost. Model 466LM utilizes a standard 6V alkaline battery with a life (dependent on use) of 3 years or more! The unit can be wall or pedestal mounted, and because of the **lighted keyboard**, it can easily be used at night. With 100,000 available code combinations, it provides the low cost and reliable performance that today's installations demand. It comes with everything required for complete, out-of-the-box operation. The vandal-resistant structure includes a stainless steel faceplate, industrial metallic keypad and locked housing. A battery is included as standard equipment. Rugged construction will give you many years of dependable service.
