

PRODUCT BULLETIN

Date: July 20, 2018
Update Number: P2018-12
Subject: 580LM Alternate Power Supply Discontinuation
Product Affected: Models 580LM/8500W/8500

The 580LM Alternate Power Supply accessory was designed to simplify the installation of the 8500W DC Battery Backup Wall Mount Wi-Fi® and 8500 DC Battery Backup Capable Wall Mount Garage Door Openers. No electrician was needed as this accessory provided power to the front of the garage to accommodate the 8500 installation.

This notification informs that the 580LM no longer meets energy efficiency standards for external power supplies in this class per U.S. Department of Energy regulation 10 CFR 430.32. Based on this information a redesign of the device to meet the regulations was conducted and determined to be cost prohibitive. Therefore, LiftMaster will sell all remaining inventory. If you have existing inventory, you can continue to sell the accessory until stock is depleted.

In order to meet current UL requirements involving powering of a residential garage door opener (models 8500W/8500) LiftMaster recommends an electrician be brought in to install an outlet within 6" of the wall mount opener.
