Date: September 28, 2018
Update Number: P2018-22
Subject: Smart Control Panel Software Update
Product Affected: Model 880LMW Smart Control Panel

In effort to simplify the myQ® connection process to help in the sales and connecting of Wi-Fi® openers, LiftMaster® will be updating the 880LMW Smart Control Panel software with two enhancements beginning in October.

#1) The LCD screen will display a myQ message

CONNECT myQ
DOWNLOAD myQ APP

The message will display for 10 seconds every time the door opens or closes and then will go back to the time/temperature screen.
The message will stop displaying when:
- The opener completes 300 cycles
- The user uses the control panel to connect the opener to Wi-Fi

To disable the message permanently:
On the Smart Control Panel, press MENU, select PROGRAM and then press ⬜➡️, press BACK, then press EXIT to return to the main screen.

#2) The programming menu will display a new order

myQ Wi-Fi OPENER
REMOTE
myQ ACCESSORY
KEYPAD

myQ Wi-Fi Opener has moved to the top of the menu list to allow easy set up.

"myQ Device" has also been updated to "myQ Accessory". Selecting this option does not change its functionality.

All Smart Control Panels purchased as an accessory or with an opener will receive these enhancements. The manuals will be updated immediately online to reflect these changes and will be updated in production in October.
