

500KG Waterproof Magnetic Lock Instruction

I Main Parameters:

Voltage:DC12V/24V

Current:0.5/0.25A

Armature plate:185mmLx61mmWx12mmD

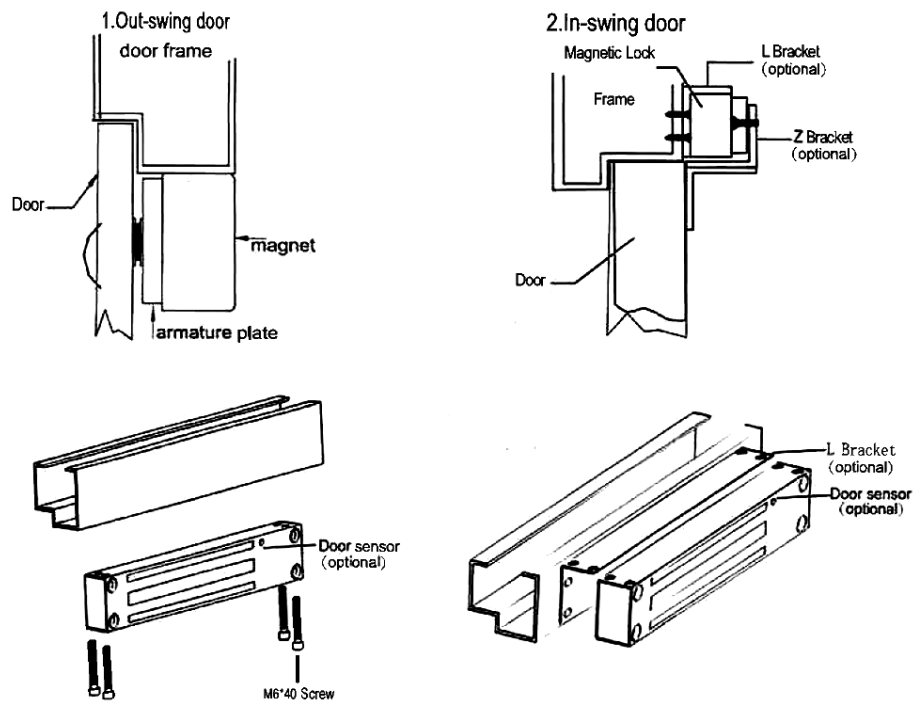

Magnet: 230mmLx63mmWx40mmD

Holding force:1200LBS

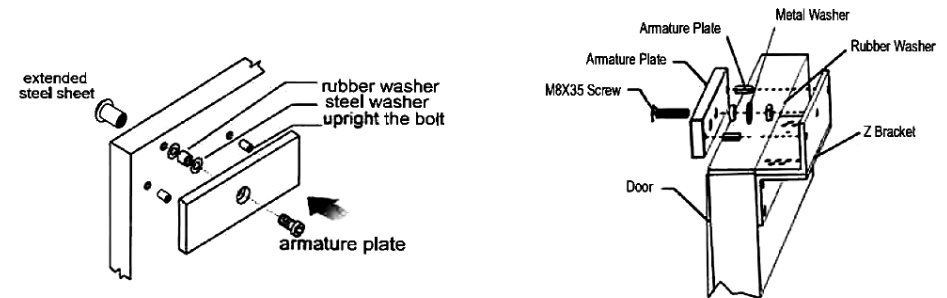

Operating temperature:-5°C~45°C

II Diagram:

Typical installation:

Armature Plate Mounts To The Door

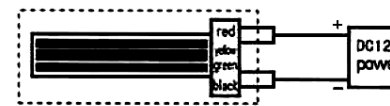

Attention: Please do not over tighten the screw for the armature plate, this will ensure the rubber washer maintain the required elasticity, allowing the armature plate to auto-adjust to the proper position in accordance to the magnetism.

III Connection :

A DC12V :red and yellow connects +; black and green connects - (chart1)

DC24V :red connects +, and black connects -, (yellow and green are in the line.) (chart 2)

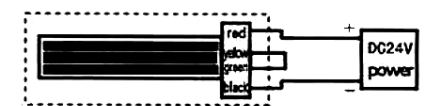

DC12V Input Wiring:

connection method

(chart1)

DC24V Input Wiring:

connection method

(chart 2)

B Door sensor connection method (optional) (chart3)

If a normally open signal is needed, please connect the black and green wires.

Door sensor

Armature and magnet are properly alignet

Input voltage too low or insufficient contact between armature and magnet

(chart3)
