# **IS40-P**

# Presence sensor for automatic industrial doors

Other use of the device is outside the permitted purpose and can not be guaranteed by the manufacturer.
The manufacturer cannot be held responsible for incorrect installations or

inappropriate adjustments of the sensor.

# **DESCRIPTION** 1. push buttons 2. LED's 3. infrared emitter 4. sensor angle indicator 5. bracket 6. cable

### **TECHNICAL SPECIFICATIONS**

Supply voltage:	12V to 24V AC ±10%; 12V to 24V DC +10% / -3%	
Power consumption:	< 3.5 W	
Mains frequency:	50 to 60 Hz	
Output:	2 relays (free of potential change-over contact)	
Max. contact voltage:	42 V AC/DC	
Max. contact current:	1 A (resistive)	
Max. switching power:	30 W (DC) / 48 VA (AC)	
Output holdtime:	0.5 s	
Mounting height:	8 ft - 16 ft	
Temperature range:	from -22 °F to + 140 °F	
Humidity:	0 - 95% non condensing	
Degree of protection:	IP65 / NEMA 4	
Dimensions:	5 in (L) x 4 in (H) x 3.8 in (W)	
Materials:	ABS and polycarbonate	
Weight:	14 oz	
Cable length:	32 ft / 105 m	
Norm conformity:	Electromagnetic Compatibility (EMC) 2004/108/EC, R&TTE: 1999/5/EC

Technology:	active infrared (AIR)
Transmitter frequency/wavelength:	875 nm
Transmitter power density:	< 250 mW/m²
Detection mode:	motion & presence
Detection field:	10 ft x 10 ft at max. mounting height of 16ft (emitting spots**)
Min. detection speed:	0 in/s to activate detection
Reaction time:	250 ms
Tilt angle:	15° - 45°

Specifications are subject to changes without prior notice. Measured in specific conditions

<sup>\*\*</sup> zone detected by spotfinder, i.e. slightly larger than actual detection field

#### **PRECAUTIONS**

- This device IS NOT intended for use as a safety sensor.
- Not recommended for dynamic envioronments. (snow, rain, fog, etc.)
- Shut off all power before attempting any wiring procedures.
- Maintain a clean & safe environment.
- Constantly be aware of pedestrian/vehicle traffic around the area.
- Always stop pedestrian/vehicle traffic through the doorway when performing tests that may result in unexpected reactions by the door.
- ESD electrostatic discharge: Circuit boards are vulnerable to damage by electrostatic discharge. Before handling any board ensure you dissipate your body's charge.

  Always check placement of all wiring before powering up to insure that moving parts will not catch any wires and cause
- damage to equipment.
- Ensure compliance with all applicable safety standards upon completion of installation.
- DO NOT attempt any internal repair of the sensor. All repairs and/or component replacements must be performed by BEA Inc. Unauthorized disassembly or repair:

  - May jeopardize personal safety and may expose one to the risk of electrical shock.
     May adversely affect the safe and reliable performance of the product and will result in a voided product warranty.

Bracket dimensions

#### SAFETY INSTRUCTIONS

Only trained and qualified personnel may install and setup the sensor.

After installation. save an access code to lock the sensor.

Test the sensor for proper performance before leaving the premises.

The warranty is void if unauthorized repairs are made or attempted by unauthorized personnel.

The installer of the door system is responsible for carrying out a risk assessment and installing the sensor and the door system in compliance with applicable national and international regulations and standards on door safety.

#### MOUNTING TIPS

Do not cover the sensor

Avoid extreme vibrations.

Avoid proximity to neon lamps or moving objects.

Avoid exposing the sensor to sudden temperature changes.

#### HOW TO USE THE REMOTE CONTROL

After unlocking, the red LED flashes and the sensor can be adjusted by remote control.

If the red LED flashes quickly after unlocking, enter an access code from 1 to 4 digits. If you do not know the access code, cut and restore the power supply and within the first minute, you

can access the sensor without introducing any access

### ADJUSTING ONE OR MORE PARAMETERS

#### CHECKING A VALUE

The number of flashes indicates the value of the chosen parameter.

#### RESTORING TO FACTORY VALUES

#### SAVING AN ACCESS CODE

The access code is recommended for sensors installed close to each other.

#### **DELETING AN ACCESS CODE**

If you do not know the access code, cut and restore the power supply and, within the first minute, you can access the sensor without introducing any access code. Additionally, within this minute an unknown access code may be deleted via the remote following the steps outlined below. Press unlock, lock, 0, 0, 0, 0.

#### DELETING AN UNKNOWN ACCESS CODE

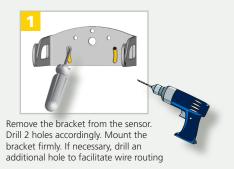

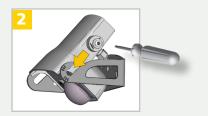

# **MOUNTING**

Position the sensor on the bracket and tighten the screws.

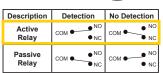

# WIRING

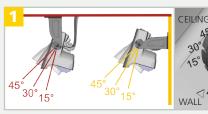

Active

Active

# SENSOR ANGLE

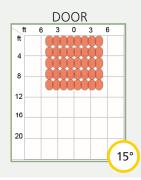

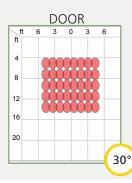

3 Passive

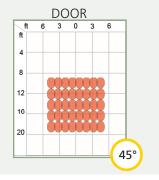

Adjust the angle of the sensor to position the detection fields.

Presence signal

Tighten the screws firmly.

- The graphics above are not to scale and for illustration purposes and represent an approximate AIR detection field when mounted at 16 ft.Infrared field = emitting spots detectable by using the Spotfinder. The actual detection field is slightly smaller and influenced by external factors.
- It's important to adjust the sensor angle to position the AIR field correctly for your application. Utilizing a mounting bracket, sensor location and reveal will dictate the sensor angle for your application.

Page 4 of 8 75.5696.07 IS40P 20170313

#### AIR PATTERN SIZE AT 15° SENSOR ANGLE

Approximate default AIR pattern size using a 15° sensor tilt angle. The higher the mounting height the larger the AIR pattern.

Mounting Height	Width *	Depth *
8 ft	5 ft	5 ft
10 ft	7 ft	7 ft
11.5 ft	7.5 ft	7.5 ft
13 ft	8.5 ft	8.5 ft
16 ft <i>(max)</i>	10 ft	10 ft

Dimensions are approximate.

Launch a setup to make a reference picture.

Step out of the detection field and do not leave any tools inside the detection field.

Upon power-up, the sensor launches a short setup.

**IMPORTANT**: Perform a functional test for proper operation before leaving the site.

Upon completion of the installation or service work, at a minimum, perform a safety inspection for the type of Door/Gate per the manufacturer recommendations and/or per ANSI/DASMA guidelines for best industry practices. Some examples but not limited to are ANSI/DASMA 102, ANSI/DASMA 107, UL 325. Make certain all appropriate industry warning labels are applied. It is the responsibility of the installer/service personell to be familiar with national and local codes, standards, and regulatory requirements. BEA Inc. recommends for installers and service personnel to be factory trained for the type of door/gate system prior to performing installation or service.

BEA hereby declares that the MILAN is in conformity with the basic requirements and the other relevant provisions of the directive 2004/108/EC.
